USER INTERFACE DESIGN

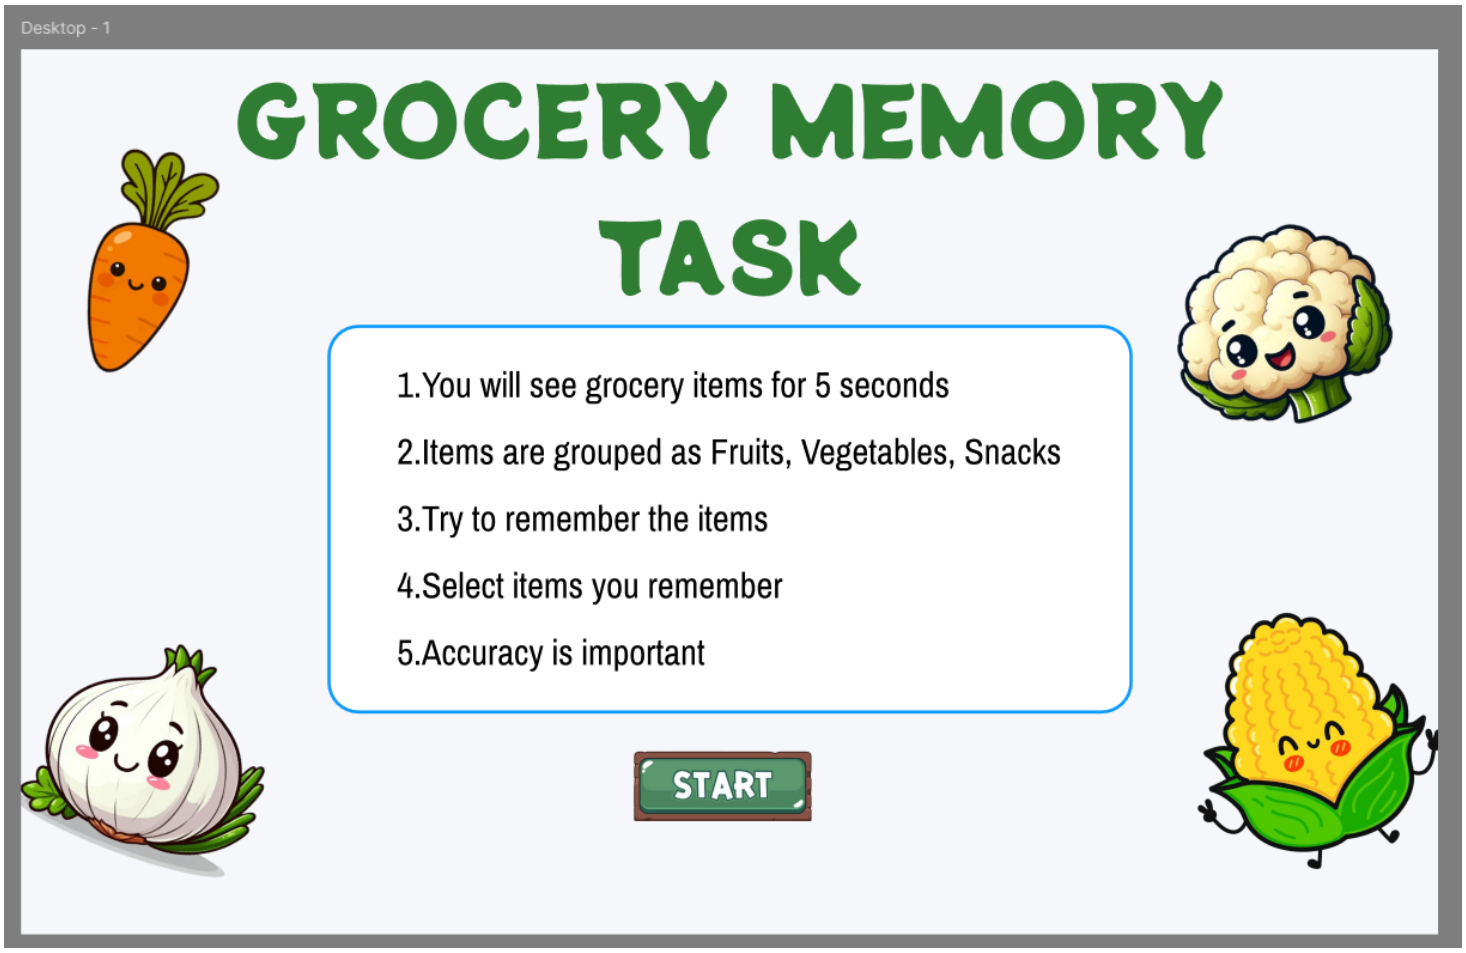
EXPERIMENT-2

NAME: HEMALATHA ST

ROLL NO: 240701189

Design a UI where users recall visual elements (e.g., icons or text chunks). Evaluate the effect of chunking on user memory.

FRAME 1: INSTRUCTION PAGE



Chunking Analysis of the Instruction Page

The instruction page introduces the grocery memory task in a clear, structured manner. Chunking is applied by breaking instructions into numbered steps, reducing cognitive load.

1. Step-by-Step Information Breakdown

- Instructions are presented in a numbered list.
- Each step focuses on one action (viewing, memorizing, recalling).
- This sequential flow improves comprehension and memory.

2. Visual and Textual Chunking

- Title “GROCERY MEMORY TASK” is bold and centered.
- Instructions are grouped inside a card with spacing.
- The “START” button is visually distinct, guiding the user forward.

FRAME 2: CHUNKING SCREEN

Chunking Analysis of the Memorization Page

This screen demonstrates chunking by grouping grocery items into categories.

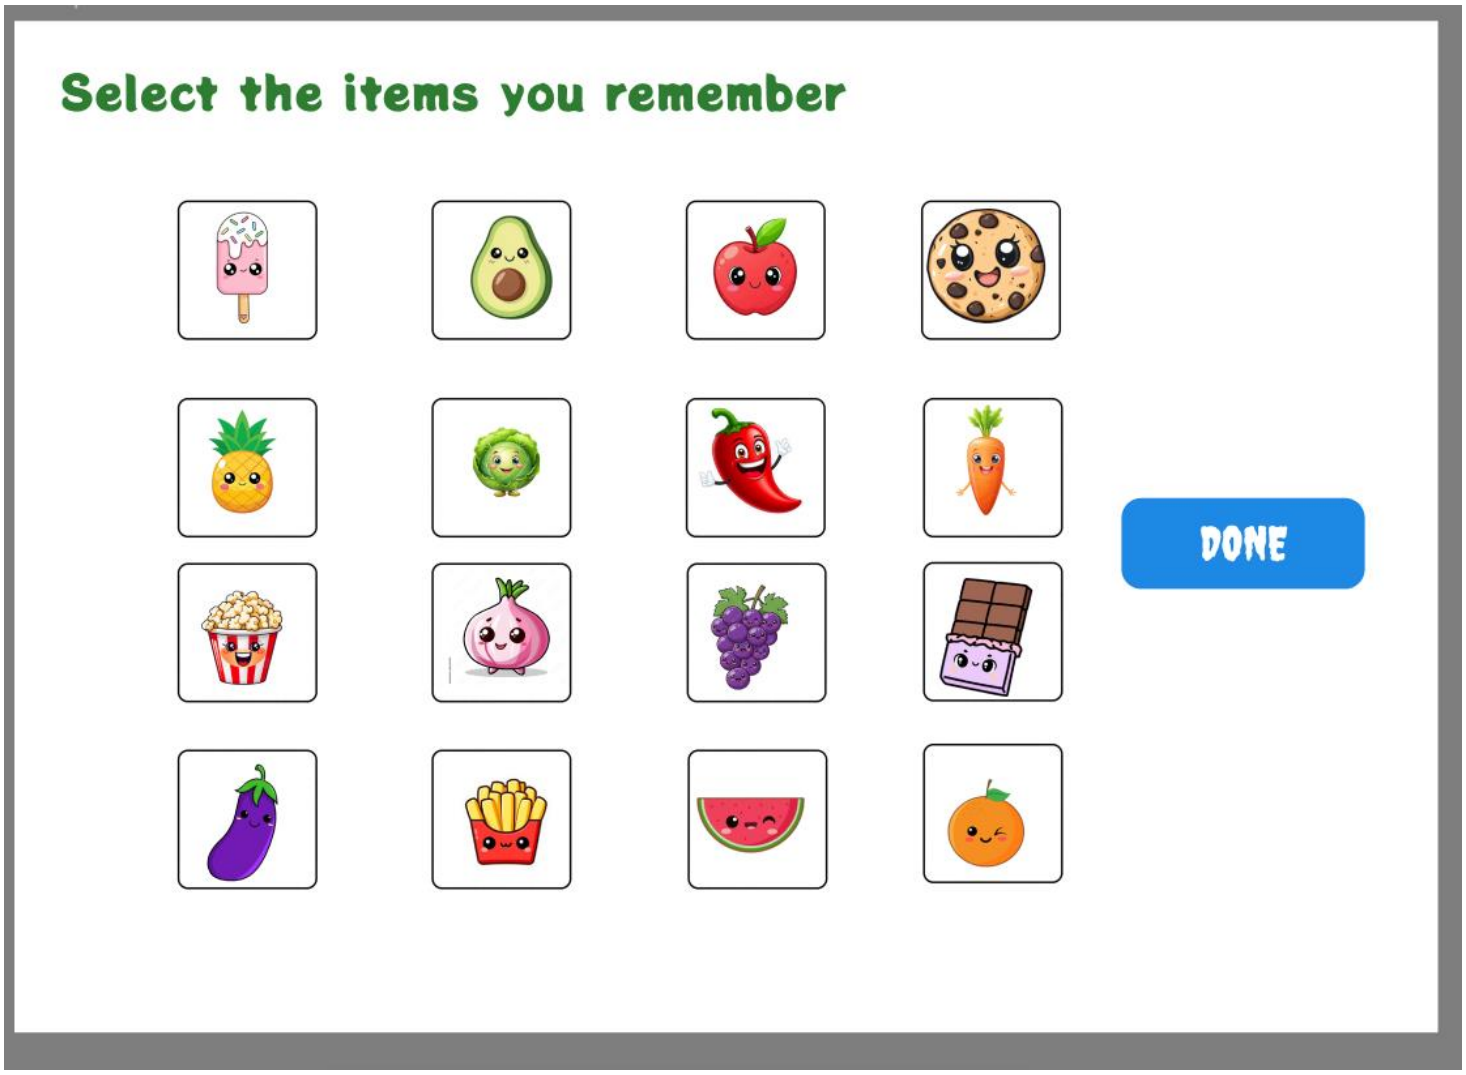
1. Categorized Information Structure

- Items are divided into **Fruits, Vegetables, Snacks**.
- Each category is a separate chunk, aiding recognition.

2. Reduced Decision Load

- Timer (5 seconds) limits focus to memorization.
- Progress bar visually reinforces time constraints.

FRAME 3: RECALL / RECOGNITION PAGE



Chunking Analysis of the Memorization Page

This screen tests memory recall by mixing correct and distractor items.

1. Individual Item Presentation

- Items are displayed in a **4 × 3 grid**.
- Each icon has a checkbox for recognition..

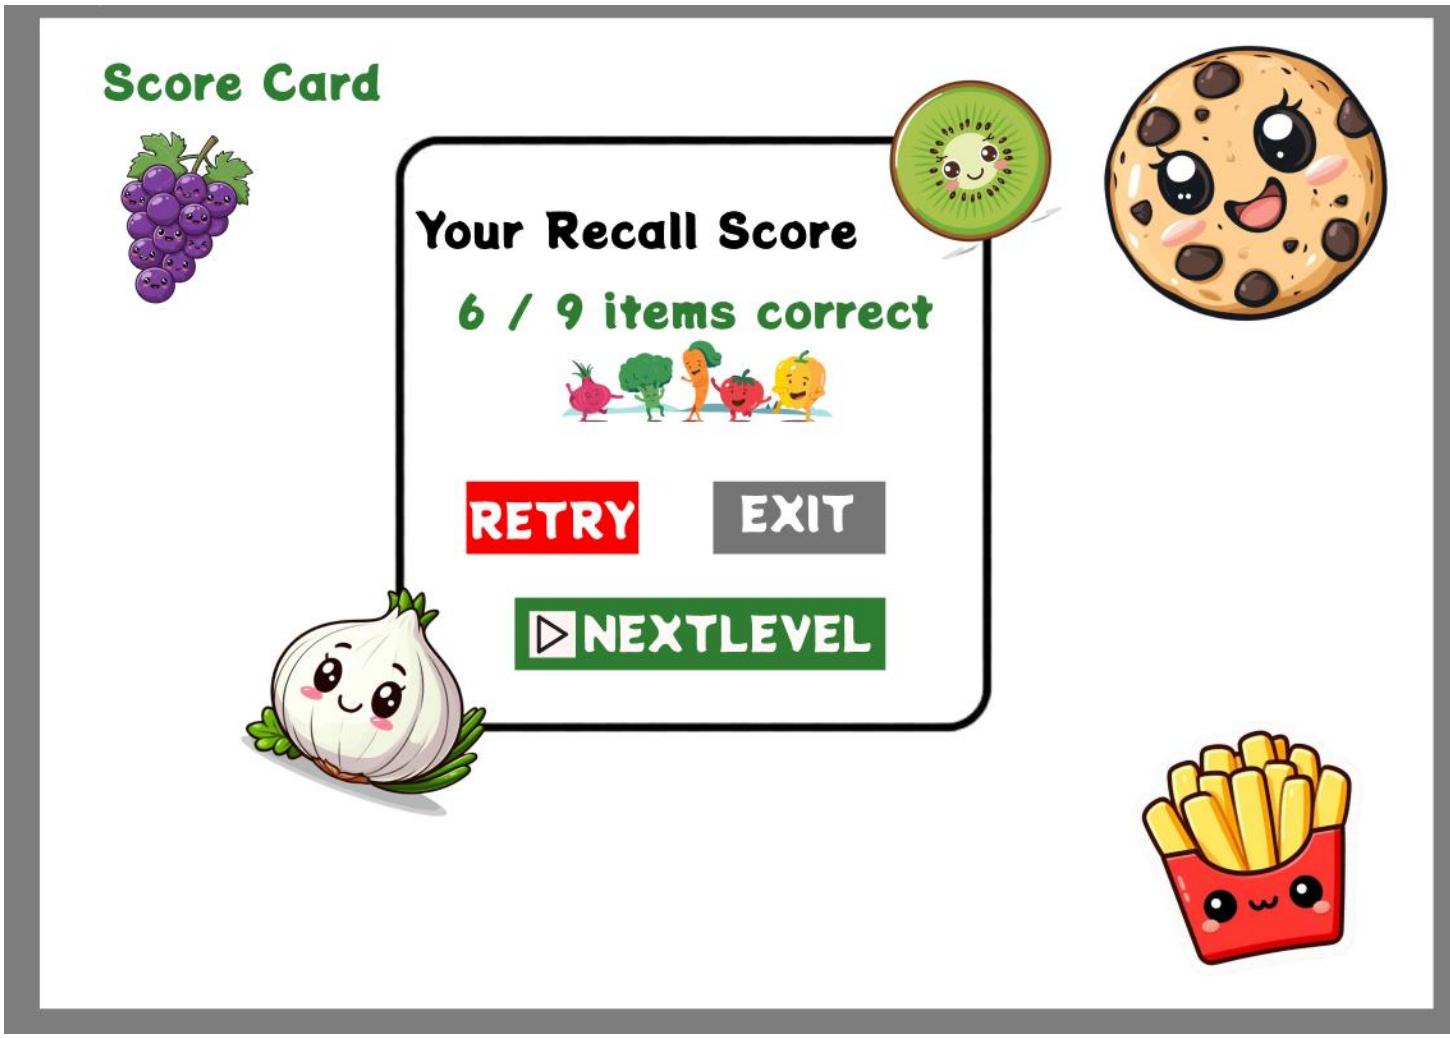
2. Task-Focused Design

- Title “Select the items you remember” clarifies the task..

3. Clear Completion Action

- The “SUBMIT” button finalizes the recall phase.

FRAME 4: RESULT PAGE



Chunking Analysis of the Recall Page

This result page summarizes performance in a simple, motivating format..

1. Simplified

- Score displayed as “X / Y items correct.

2. Visual Reinforcement

- White score card with rounded corners..

3. Clear Completion Action

- The “Try Again” option allows users to repeat and improve
